INSIDE THIS ISSUE

- 1 Little Bear Holsters
- 1 Monthly Sale
- 2 Website Update

For general discussion, please explain your product line.

I make hand made holsters. They are not cookie cutters... they are made for the buyer. I do not stock holsters... My holsters are for mainly concealed carry and are given a lot of time and care to make.

What were you looking for in a leather sewing machine?

I wanted a leather sewing machine that was easy to use, held up to daily wear and tear and made nice, tight stitches. i am not concerned w/ exact stitch distance or perfect radius... I want something that is like my holsters: not pretty but practical and lasts.

What led you to the Tippmann Boss for your leather crafting equipment needs?

I talked to some saddle and boot makers in the Tacoma area. They said it would be a good start up.

What type of machine, if any, were you using prior to the Tippmann?

This is my first—or second, since I just bought another one for a back up. My iron one is great. Just had to bring it up to speed w/new internals.

Suggestions to others who have a small to mid range manufacturing project, who are in need of a leather sewing machine:

I think it is a great stitcher! I like it because it seems more 'hands-on' and personal. I have pulled off some amazing things, I thought I would never do, with my Boss.

The one thing to remember is TUNE IT! If there is an issue, the guys in the repair shop are great. I learned more about my machine from them than I did my video. They were clear and concise with information.

Thank you very much. I am pleased w/ your products and don't want to go anywhere else any time soon.

v/r

Dave

Tippmann Easy Parts Finder

I don't think that we can make finding replacement parts for your machine any easier than this. When you go to the parts finder for your machine, it brings up a picture of the schematic from your manual. Simply click on the part that you need, and then you can add the part to your shopping cart.
